

# IBIS Provisioning

Everything you need to configure and provision your Inmarsat services

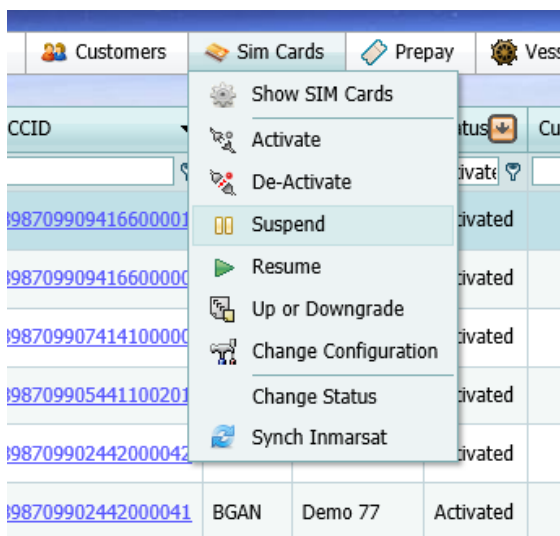

IBIS is the next generation provisioning platform for Inmarsat I4 services. Whether you are dealing with BGAN, M2M, Isatphone, Swift Broadband or Fleet Broadband, whether you have prepaid or postpaid services, whether you operate your own infrastructure for data services or use Inmarsat's, IBIS Provisioning gives you and your customers full control, via an easy yet powerful user interface.

## Cater for the whole distribution chain

IBIS is used at all levels in the distribution Chain. Inmarsat Distribution partners get their provisioning process automated. Their customers get online access to manage their own services.

## Care for your customers

Your customers will be able to log in to the customer portal, where they can review the status of their services, and fully configure them. They will no longer require your assistance when they need to activate or suspend a SIM card, when they want to top up their prepaid services, or want to make changes to the service configuration.

Customers	Sim Cards	Prepay	Vess
CCID			
98709909416600001			ivated
98709909416600000			ivated
98709907414100000			ivated
98709905441100201			ivated
98709902442000042			ivated
98709902442000041	BGAN	Demo 77	Activated

## Simple service configuration

The service configuration of IBIS is so straightforward that even inexperienced customers can do the job. They simply expand the service configuration of their SIM cards, and check the options that they want. IBIS takes care of getting it all synched up with Inmarsat.

<input checked="" type="checkbox"/> Standard IP APNs	<a href="#">Hide Options</a>
	bgan.inmarsat.com bgan-chi.inmarsat.com bgan-rus.inmarsat.com
Streaming	Up to 64 Kb/s
IP Address	Dynamic
<input checked="" type="checkbox"/> Telephony	<a href="#">Options</a>
<input checked="" type="checkbox"/> SMS	<a href="#">Options</a>
<input checked="" type="checkbox"/> ISDN (56 Kb/s)	<a href="#">Options</a>
<input checked="" type="checkbox"/> ISDN (64 Kb/s)	<a href="#">Options</a>
<input type="checkbox"/> Fax/audio 3.1	

Changed service Standard IP: Max Streaming speed changed from 512 to 64. Added service ISDN (64 Kb/s).

## Empower your staff

Where inexperienced users can activate a SIM card in just a few mouse clicks, advanced users can configure the services up to the lowest level of detail if they want. Your support staff has full access to the provisioning structures that are exchanged with the Inmarsat platforms.

## No more need for Inmarsat BSS

With IBIS provisioning, your staff will rarely use the Inmarsat BSS anymore, and they will appreciate this. Typical tasks are done in IBIS in a fraction of the time compared to the Inmarsat BSS.

## Integrate with your own POP

If you have implemented your own infrastructure for handling IP data services, IBIS can be set up to integrate with your POP, too. This includes features like IP Address management, access control, quality of service monitoring and control.

## Stay informed

IBIS provides comprehensive operational and management information. Easy to use filters make it simple to find the details you need.

ICCID	Prod	Customer	Status
994			
89870990941660999			Unallocated
89870990941660899			Unallocated
89870990941660799			Unallocated
89870990941660699			Unallocated
898709909416605994	GSPS PRO		Unallocated
898709909416604994	GSPS PRO		Unallocated

You can design your own reports to support your strategic decisions.

With IBIS provisioning you own and have access to all of your provisioning data. If you have external reporting tools, just tap in to the database.

## Forget about vouchers

If you work a lot with prepay services, IBIS will make your life much easier by providing you the option to inspect the prepay balance of your SIM cards and simply top them up, without the need to use vouchers.

## Support BGAN M2M

IBIS is tailored to the specific needs for BGAN M2M projects, and can provide useful information for the operational management of M2M installations. It offers full integration

with the Inmarsat Remote Terminal Manager system.

## Integrated Billing

IBIS Provisioning can be set up as an add-on module of the IBIS billing platform. This results in a single portal that takes care of all the business processes around your satellite communication services.

## Keep innovating

IBIS is continuously evolving, with at least 3 scheduled releases per year that come packed with new functionality. Whenever Inmarsat introduces new services, IBIS is ready to manage them.

## Customize your IBIS

IBIS is designed in a flexible way that makes it possible to implement extensions on top of the core platform. This makes it possible to adapt the platform to your specific business processes rather than the other way around.

## About Pragmalogic

IBIS is designed and developed by Pragmalogic. Pragmalogic has a proven track record in billing and provisioning systems as well as value added services in the satcom industry. Visit us at [www.pragmalogic.nl](http://www.pragmalogic.nl).
